

What is claimed is:

- Sub  
A1
1. A stator (1), in particular for an electrical internal rotor motor, comprising at least one stator pole tooth (7), comprising at least one preassembled coil (11) that is slid onto the stator pole tooth (7) and secured to it, wherein the coil (11) is secured to the stator pole tooth (7) by means of a pole shoe (15).
2. The stator according to Claim 1, wherein a coil form (28) is located on the pole shoe (15).
3. The stator according to Claim 1, wherein the pole shoe (15) is made of a magnetically soft solid material.
4. The stator according to claim 1, wherein the coil form (28) is integrally extruded on the pole shoe (15).
5. The stator according to Claim 3, wherein the coil form (28) comprises at least one electrical connecting element (34).
6. The stator according to Claim 5, wherein the electrical connecting element (34) is a pin (38).

SUN 7

the pole shoe (15) is secured to the stator pole tooth (7) by means of press fit.
